大模型时代Tool Learning的 必要性探讨

米尔阿迪力江 麦麦提
(昌吉, 2024.10.23)

Outline

- Introduction of LLM
- LLM Performance in NLP
- Fine-Tuning Strategies & Challenges for LLM
- Categorization of Tools
- Benchmarking Tool Use
- Open-source Tool-Kit

Introduction of LLM

The Three Paths to Achieving AI

输入经验

将知识通过规则等方式教给计算机，进行符号处理

实现人脑机制

解明人脑机制，基于相同原理实现人类智能

从数据中学习

通过数据驱动，ML方法模仿人类智能

LLM = 通过数据学习 + 受人脑启发 + 输入经验知识

What Are Large Language Models?

大规模**语言模型** (LLM) 是基于**Transformer** 架构的模型，它们通过**自监督或半监督学习**在大量**未标记的文本**上进行广泛训练。这些模型旨在生成听起来自然且与上下文相关的文本，适用于各种风格和格式。

ChatGPT类算法的壁垒、 开源和算力私有化

2月28日 晚20:00

分享内容

1. 从数据、算法、算力、环境等方面讨论国内企业研发ChatGPT的壁垒。
2. 探究ChatGPT开源的意义、可能性、所需要的生态环境、难点以及如何克服这些难点。
3. 围绕算力私有化讨论ChatGPT带给芯片、算法、投资人、云公司的机会是哪些。

新疆昌吉学院如何哇？你怎么看这所学校啊？

新疆昌吉学院（Changji University）位于新疆昌吉回族自治州，是一所本科教育为主的地方性高校。以下是我对这所学校的一些客观评价，希望能帮助你了解：

优点：

1. 区域优势：

昌吉地处新疆的核心区域，距离乌鲁木齐较近，交通较为便利。学校也因地处民族区域，具有多民族文化的融合特点，对学生的包容性较强。

2. 专业设置：

学校的重点专业集中在师范教育、农业科技、机械工程等领域，尤其注重培养地方所需的实用型人才。

- 对于立志从事教师职业的学生，学校的师范类专业有一定优势，很多毕业生在新疆本地中小学就业。

3. 校园环境：

学校位于昌吉州，周边自然风光优美，环境相对安静，适合学习与生活。

4. 政府扶持：

新疆近年来在教育方面有较大投入，昌吉学院作为地方高校，得到了政策和资金的支持，尤其是面向少数民族和当地经济发展的专业。

新疆昌吉学院是什么时候成立的?

新疆昌吉学院成立于2001年5月，其前身是成立于1959年的昌吉师范学校。2001年5月，昌吉师范学校升格为昌吉学院，成为区属高等本科院校，由教育部和新疆维吾尔自治区人民政府批准设立。学院位于新疆天山北坡经济带、乌昌石城市群核心发展区、丝绸之路经济带新疆核心区的昌吉市，拥有园丁校区和新城校区两个校区。

给我提供一个大模型概要有关的提纲

ChatGPT

当然，这里是一个关于大型机器学习模型（如GPT、BERT等）的概要提纲。这个提纲将帮助您深入了解大型模型的基本概念、架构、应用场景以及它们在未来发展中可能面临的挑战和机遇。

1. 引言

- 大型模型在人工智能领域的兴起背景
- 大型模型的定义和重要性

2. 大型模型的基本原理和架构

- 深度学习和神经网络基础
- 大型模型的核心组件（如变换器架构）
- 数据和算法在模型训练中的作用

3. 主要大型模型的发展历程

- 不同代的大型模型（如GPT系列、BERT、T5等）的发展和比较
- 关键技术突破和创新点

4. 大型模型的应用场景

- 自然语言处理（NLP）
- 图像识别和处理
- 其他领域的应用（如医疗、金融、游戏等）

5. 大型模型的优势和挑战

- 处理复杂问题和大数据集的能力
- 模型偏见和伦理问题
- 计算资源和环境影响
- 数据隐私和安全性问题

6. 未来发展趋势

- 技术创新和模型优化

You

帮我写一个slides提纲，有关机器学习基础与实践。

ChatGPT

当然，以下是一个关于“机器学习基础与实践”的幻灯片提纲。这个提纲将帮助您设计一个包含机器学习的基本概念、关键技术和方法、实际应用案例，以及未来发展趋势的完整演示。

1. 幻灯片 1: 标题页

- 标题：机器学习基础与实践
- 副标题：从理论到应用
- 演讲者姓名和机构

2. 幻灯片 2: 介绍

- 机器学习的定义和重要性
- 本次演讲的目的和结构

3. 幻灯片 3: 机器学习的历史简介

- 从最初的概念到现代的发展
- 关键技术突破和里程碑事件

4. 幻灯片 4: 机器学习的类型

- 监督学习、非监督学习、半监督学习、强化学习
- 每种类型的基本概念和应用示例

5. 幻灯片 5: 关键算法和模型

- 决策树、支持向量机、神经网络、深度学习等
- 每种算法的基本原理和适用场景

6. 幻灯片 6: 数据预处理和特征工程

- 数据预处理的重要性
- 特征选择和特征提取
- 实例展示数据处理流程

7. 幻灯片 7: 机器学习的实际应用案例

如果想从事人工智能开发行业的话，对一个新人你有什么建议呀？

ChatGPT

从事人工智能（AI）开发是一个充满挑战和机遇的领域。对于新人来说，以下是一些建议：

1. **基础教育**：学习计算机科学、数学和统计学的基础知识。对于人工智能特别是机器学习而言，线性代数、概率论、微积分和算法是非常重要的。
2. **编程技能**：精通至少一种编程语言，Python是最受欢迎的语言之一，因为它拥有大量的AI和机器学习库，例如TensorFlow和PyTorch。
3. **在线课程和资源**：利用在线平台如Coursera、edX、Udacity等，参加AI和机器学习的课程。
4. **实际项目**：通过实际项目来应用你的知识。GitHub上有很多开源项目，你可以参与其中来提高你的技能。
5. **理解业务**：了解AI技术如何解决实际问题，并对其可能带来的业务和社会影响有所认识。
6. **读原始论文**：阅读领域内的经典和最新论文，如在arXiv上发布的论文，以保持对最新研究动态的了解。
7. **网络和社区**：参加Meetups、Conferences、Workshops等，建立职业网络，与同行交流。
8. **批判性思维**：培养批判性思维能力，对数据、模型和结果进行仔细分析。
9. **伦理和法律知识**：理解与人工智能相关的伦理和法律问题，例如数据隐私、算法偏见等。
10. **持续学习**：AI领域在快速发展，持续学习新技术、新算法是非常重要的。

记住，建立一个坚实的基础，然后不断地学习和实践是关键。每个人的学习路径都是独特的，找到最适合你的方式去探索和成长。

You

是非这个行业的，想转行做人工智能，有啥建议的学习方向吗？

ChatGPT

如果您想从其他行业转入进入人工智能（AI），以下是一些建议的学习方向和步骤：

1. **学习基础**：首先，您需要建立在数学（特别是线性代数、概率论和统计学）和编程（推荐Python）方面的坚实基础。这些是深入理解AI的前提。
2. **了解AI的子领域**：人工智能包含了机器学习、深度学习、自然语言处理、计算机视觉等子领域。初步了解这些子领域，确定您最感兴趣的领域。
3. **参加在线课程**：参加Coursera、edX、Udacity等平台上的入门课程，例如Andrew Ng的《机器学习》课程，或者Google的机器学习速成课程。
4. **项目实践**：通过小项目开始实践，比如使用Python编写一个简单的数据分析脚本，或者使用机器学习库如scikit-learn来构建简单模型。
5. **深化专业知识**：在有了基础之后，可以通过专门的书籍、课程和项目来深化特定领域的知识，例如深度学习、强化学习或者自然语言处理。
6. **参与开源项目**：GitHub上有许多AI相关的开源项目，参与这些项目能够帮助您理解实际应用中的问题，并提高解决问题的能力。
7. **建立网络**：加入AI相关的论坛和社区，如Reddit的r/MachineLearning、Kaggle等，与其他从业者交流心得。
8. **了解伦理和社会影响**：AI技术的使用会带来伦理和社会问题，理解这些问题对于负责任地开发和应用AI技术很重要。
9. **求知若渴**：AI是一个不断发展的领域，保持好奇心和学习的渴望，不断更新您的知识和技能。
10. **思考如何结合自己的背景**：思考您之前的行业经验和知识如何与AI结合。许多AI应用是跨领域的，您之前的专业知识可能会成为宝贵的资产。

转行到AI领域可能既充满挑战也富有成就感。重要的是保持耐心，不断学习，并乐于解决问题。

You

“我喜欢新疆北疆，景色非常迷人，特别美丽，不过从没去过。” \n\n麻烦把以上这几句话翻译成英语，德语，法语，阿拉伯语，土耳其语，泰语等几个多语种。

G

ChatGPT

当然，以下是您提供的句子翻译成不同语言的版本：

英语:

"I really like the northern part of Xinjiang. The scenery is very enchanting and incredibly beautiful, though I've never been there."

德语:

"Ich mag den Norden von Xinjiang sehr. Die Landschaft ist sehr bezaubernd und unglaublich schön, obwohl ich noch nie dort war."

法语:

"J'aime beaucoup le nord du Xinjiang. Le paysage est très charmant et incroyablement beau, bien que je n'y sois jamais allé."

阿拉伯语:

"أحب شمال شينجيانغ كثيراً. المناظر الطبيعية ساحرة وجميلة للغاية، على الرغم من أنني لم أذهب إلى هناك قط."

土耳其语:

"Xinjiang'ın kuzeyini çok seviyorum. Manzara çok büyüleyici ve inanılmaz güzel, ama hiç oraya gitmedim."

泰语:

"ฉันชอบภาคเหนือของซินเจียงมาก ทิวทัศน์ที่นั่นมีเสน่ห์และสวยงามมาก แม้ว่าฉันจะไม่เคยไปที่นั่น."

这些翻译应该准确传达了原文的意思和情感

U

You

把以上句子可以翻译成东南亚地区几个国家的语言吗？

G

ChatGPT

当然，我可以将您提供的句子翻译成几种东南亚地区国家的语言：

印度尼西亚语:

"Saya sangat suka bagian utara Xinjiang. Pemandangannya sangat memukau dan sangat indah, meskipun saya belum pernah ke sana."

马来语:

"Saya sangat suka bahagian utara Xinjiang. Pemandangannya sangat menarik dan sangat cantik, walaupun saya belum pernah ke sana."

越南语:

"Tôi rất thích phần phía bắc của Tân Cương. Cảnh quan ở đó rất hấp dẫn và cực kỳ đẹp, mặc dù tôi chưa từng đến đó."

泰语(重复):

"ฉันชอบภาคเหนือของซินเจียงมาก ทิวทัศน์ที่นั่นมีเสน่ห์และสวยงามมาก แม้ว่าฉันจะไม่เคยไปที่นั่น."

菲律宾语:

"Gusto ko talaga ang hilagang bahagi ng Xinjiang. Ang tanawin ay napaka-kaakit-akit at lubos na maganda, bagaman hindi pa ako nakapunta doon."

这些翻译尽可能准确地保持了原文的含义和情感。

U

You

麻烦给我写一个python 脚本，需要把tsv 格式的文件转换成json 格式的文件。

G

ChatGPT

当然，我可以为您提供一个Python脚本来将TSV格式的文件转换成JSON格式的文件。以下是脚本的一个基本示例：

```
python
import csv
import json

# 将TSV文件转换为JSON文件的函数
def tsv_to_json(tsv_file_path, json_file_path):
    # 读取TSV文件
    with open(tsv_file_path, 'r', encoding='utf-8') as tsvfile:
        reader = csv.DictReader(tsvfile, delimiter='\t')

        # 创建一个列表来保存所有行的数据
        data = []
        for row in reader:
            data.append(row)

    # 写入JSON文件
    with open(json_file_path, 'w', encoding='utf-8') as jsonfile:
        json.dump(data, jsonfile, indent=4, ensure_ascii=False)

# 使用示例
tsv_file = 'example.tsv' # TSV文件的路径
json_file = 'output.json' # 输出JSON文件的路径
tsv_to_json(tsv_file, json_file)
```

U

You

我不喜欢用with open 格式来文件操作，重写一下！

G

ChatGPT

当然，我可以按照您的要求修改脚本，不使用`with open`来进行文件操作。请注意，虽然`with open`是推荐的方式，因为它可以自动处理文件的关闭，但是如果您不想使用它，可以直接使用`open`和`close`来手动管理文件的打开和关闭。下面是修改后的脚本：

```
python
import csv
import json

def tsv_to_json(tsv_file_path, json_file_path):
    # 打开TSV文件
    tsvfile = open(tsv_file_path, 'r', encoding='utf-8')
    reader = csv.DictReader(tsvfile, delimiter='\t')

    # 创建一个列表来保存所有行的数据
    data = []
    for row in reader:
        data.append(row)

    # 关闭TSV文件
    tsvfile.close()

    # 打开JSON文件
    jsonfile = open(json_file_path, 'w', encoding='utf-8')
    json.dump(data, jsonfile, indent=4, ensure_ascii=False)

    # 关闭JSON文件
    jsonfile.close()

# 使用示例
tsv_file = 'example.tsv' # TSV文件的路径
json_file = 'output.json' # 输出JSON文件的路径
tsv_to_json(tsv_file, json_file)
```

ToolLLM.pdf

what is the main idea of this paper? BTW, Could you please summarize the prons and cons of this paper?

Main Idea of the Paper:

The paper "**ToolLLM: Facilitating Large Language Models to Master 16000+ Real-World APIs**" introduces a novel framework aimed at enhancing the tool-use capabilities of open-source large language models (LLMs), particularly focusing on API integration. The authors propose **ToolLLaMA**, an enhanced version of LLaMA, trained using their **ToolBench** dataset. ToolBench includes instructions and real-world APIs, generated and annotated with the help of ChatGPT. They also propose a **decision tree-based reasoning strategy (DFSDT)** to improve complex decision-making and reasoning. A neural **API retriever** is integrated to recommend relevant APIs for each task, making the model effective in multi-tool scenarios.

Pros:

1. **Extensive API Collection:**

The paper collects over 16,000 real-world APIs across 49 categories, enabling LLMs to generalize to diverse, practical applications.

2. **Multi-Tool Scenarios:**

ToolLLaMA can manage complex tasks involving multiple tools, surpassing existing solutions that only support single-tool operations.

3. **Depth-First Search Decision Tree (DFSDT):**

米尔阿迪力江

2024/10/24 27

LLM Everywhere --- Conversation, QA, ... , MT, Coding, Reading Paper

Cons:

1. Dependence on ChatGPT for Dataset Construction:

- The reliance on ChatGPT for instruction generation and annotation raises concerns about bias or limitations inherent in ChatGPT's outputs.

2. High Computational Costs:

- Using DFSDT and multiple API calls increases computational overhead, especially compared to simpler baseline methods like ReACT.

3. Context Length Limitation:

- Despite extending context length to 8192 tokens, some long API responses may still exceed the limit, requiring further truncation or compression.

4. Complex Implementation:

- The multi-step reasoning process and decision-tree-based strategy may complicate practical implementation and increase latency.

5. Limited Evaluation Metrics:

- While pass and win rates provide useful insights, other aspects like user experience or system efficiency are not thoroughly evaluated.

This summary captures the core contributions and trade-offs of the ToolLLM framework. Let me know if you need more detailed insights or further analysis on specific sections!

please summarize shortly

Main Idea:

The paper introduces **ToolLLM**, a framework to improve large language models' (LLMs) ability to use over 16,000 real-world APIs. It develops **ToolLLaMA**, trained on a new dataset called **ToolBench**. The framework integrates a **neural API retriever** and introduces a **DFSDT reasoning strategy** to handle complex, multi-tool tasks efficiently.

Pros:

- Supports complex multi-tool scenarios.
- Strong generalization to unseen APIs.
- DFSDT improves decision-making compared to ReACT.
- API retriever automates tool selection.
- Publicly available dataset and code for community use.

Cons:

- Relies heavily on ChatGPT for dataset creation.
- High computational cost due to DFSDT and API calls.
- Some responses may exceed the model's context length.
- Implementation complexity increases latency.
- Limited focus on efficiency and user experience metrics.

Let me know if you need further clarifications!

LLM Everywhere --- Conversation, QA, ... , MT, Coding, **Reading Paper**

please translate the shortly summarization into the chinese!

主要内容:

该论文介绍了**ToolLLM**框架, 用于提升大型语言模型 (LLM) 使用超过16,000种真实世界API的能力。通过新数据集**ToolBench**训练出**ToolLLaMA**模型。该框架集成了**神经API检索器**, 并引入了**DFSDT**推理策略, 以有效处理复杂的多工具任务。

优点:

- 支持复杂的多工具场景。
- 对未见过的API具有强大的泛化能力。
- DFSDT比ReACT在决策上表现更佳。
- API检索器实现自动化工具选择。
- 数据集和代码公开, 有助于社区创新。

缺点:

- 数据集构建过于依赖ChatGPT。
- DFSDT和API调用增加了计算成本。
- 部分响应可能超过模型的上下文长度。
- 实现复杂度高, 增加了延迟。
- 缺乏对效率和用户体验的评估。

如需进一步说明, 请告诉我!

给我推荐一下跟大模型tool learning 有关的最新的研究工作 (学术论文或者slides) ~

已搜索 4 个网站 ▾

Here are some of the latest research papers and resources on **tool learning with large language models (LLMs)**:

1. "Tool Learning with Large Language Models: A Survey"

This paper, published in May 2024, provides a comprehensive overview of how LLMs are augmented with external tools to handle complex tasks. It covers the full lifecycle of tool integration—task planning, selection, calling, and response generation. The paper also highlights several benchmarks and evaluation strategies and discusses the challenges and future directions in this field.

[Link to the survey](#) PAPERS WITH CODE .

2. "Large Language Models as Tool Makers (LATM)"

This research introduces a framework where powerful models like GPT-4 generate reusable tools (Python functions) from task demonstrations, which smaller models (e.g., GPT-3.5) can later utilize efficiently. The tool-making process involves proposing, verifying, and wrapping tools for reuse across various tasks. This setup demonstrates how tool creation and usage can improve efficiency and adaptability.

[Explore the LATM paper](#) ARSIV .

These resources represent cutting-edge directions in **tool learning**, focusing on creating reusable tools and improving reasoning abilities by augmenting LLMs with external functions or frameworks. This research demonstrates promising steps toward enhancing efficiency and flexibility for complex problem-solving.

LLM --- Image Generation (DALL-E)

请给我生成一个昌吉古城的照片?

已根据描述生成了一张反映新疆昌吉古城风貌的图片。请查看上方图像，如果还有其他需求或修改，请告诉我!

我觉得不太像古城，应该路边有一些小店铺吧!

已根据您的描述更新了昌吉古城的场景，加入了街边小店和市集氛围。请查看上方图像，如有任何进一步的修改需求，请告诉我!

LLM --- Image Generation (DALL-E)

我想在这张图的基础上加一扇大门，当作古城的入口，把这张图给我改一下~

Currently, I cannot directly edit or combine the uploaded image with a new gate. However, you could take the following steps to achieve the desired result:

1. Use a Photo Editing Tool:

- Tools like **Photoshop**, **GIMP** (free), or **Canva** allow you to add a gate image as an overlay on top of the original image.
- You can select and position the gate at the entrance to align it perfectly with the street layout.

2. AI-based Image Editors:

- You could use **DALL-E's inpainting** feature to introduce a gate directly into the existing image. Inpainting allows you to modify parts of an image seamlessly by masking an area where you want the gate to appear.

3. Send Back to Me:

- If you'd like, you can use a masking tool to mark where you want the gate, upload that version, and I can generate a gate-focused image overlay using DALL-E to fit that space.

This way, you can have the entrance gate integrated professionally and aligned with the lively street view of Changji. Let me know if you'd like specific steps for one of the tools or more help with inpainting instructions!

我想要一张新疆昌吉著名建筑“昌吉古城”傍晚的样子！

这是一幅展现新疆昌吉古城傍晚景色的图像。夕阳的余晖洒在传统的中式建筑上，瓦顶街道旁悬挂着红色灯笼，温暖的光线为街景增添了一种怀旧且舒适的氛围。小商铺仍在营业，人们悠闲地在街上散步。背景中的山峦与城市景观自然融合，天色在橙色与紫色之间过渡，捕捉到了傍晚时分的美妙时光。

如有更多调整或进一步需求，请告诉我！

Fine-Tuning Strategies & Challenges for LLM

What Is the Instruction Tuning?

- Instruct tuning指在**多个任务**上，使用自然语言的形式构建指令数据集，并对模型进行**微调**
- Instruct通常由**人类的自然语言描述**与**任务输入**拼接而成
- 根据人工标注的指令形式，可分为学术性指令和人工自然语言指令

上图为Instruct tuning示例，训练阶段（虚线）在机器翻译、情感分析等多个任务上构造指令微调LLM，推断阶段（实线）可泛化到文本分类任务上

学术性指令

Template 1

<premise>
Based on the paragraph above, can we conclude that
<hypothesis>?
<options>

Template 2

<premise>
Can we infer the following?
<hypothesis>
<options>

Template 3

Read the following and determine if the hypothesis can be inferred from the premise:
Premise: <premise>
Hypothesis: <hypothesis>
<options>

Template 4, ...

人工自然语言指令

Use-case	Prompt
Brainstorming	List five ideas for how to regain enthusiasm for my career
Generation	Write a short story where a bear goes to the beach, makes friends with a seal, and then returns home.
Rewrite	This is the summary of a Broadway play: { summary } This is the outline of the commercial for that play:

内容来源：小牛翻译-生成式LLM系列直播，5期，刘新宇

Why Instruction Tuning?

- 使大模型的输入与人类习惯“对齐”
- 指令微调可以提高模型的指令理解能力，使得模型能根据输入的Instruction自动识别任务类型，并执行对应的操作
- Instruct tuning区别于fine-tuning和prompting，需要标注数据更少，可在未见任务上指令泛化

(A) Pretrain-finetune (BERT, T5)

(B) Prompting (GPT-3)

(C) Instruction tuning (FLAN)

研究表明，当模型规模越大，微调时见过的指令任务种类越多，其泛化能力越强。

Flan-PaLM模型在不同scale下进行instruct tuning性能对比

Instruction tuning 与 fine-tuning 和 prompt 对比

内容来源：小牛翻译-生成式LLM系列直播, 5期, 刘新宇

What Is the RLHF (Reinforcement Learning with Human Feedback)?

- RLHF是一种**基于人类反馈**的强化学习方法，使用基于Agent的强化学习框架进行模型参数的更新
- 通过交互界面进行打分，使得模型可以利用人类反馈进行学习
- **评分模型**训好后，可与**生成模型**形成迭代闭环，完成LLM的训练

PPO强化学习方法架构图

内容来源：小牛翻译-生成式LLM系列直播, 5期, 刘新宇

Why RLHF?

- 使大模型的输出与人类期望“对齐”
- RLHF可以提高模型的鲁棒性与安全性，使得生成结果更加遵循指令和事实，并大幅度减少有毒输出
- RLHF使得模型具备了Say no的能力

Prompt: Explain the moon landing to a 6 year old in a few sentences.

Completion: GPT-3

Explain the theory of gravity to a 6 year old.

Explain the theory of relativity to a 6 year old in a few sentences.

Explain the big bang theory to a 6 year old.

Explain evolution to a 6 year old.

InstructGPT

People went to the moon, and they took pictures of what they saw, and sent them back to the earth so we could all see them.

使用了RLHF的InstructGPT比GPT-3更加遵循指令

XM 你知道2023年中国春节联欢晚会的节目单吗?

很抱歉，我无法预测未来的事件和信息。2023年中国春节联欢晚会的节目单还没有发布，一般会在春节前夕或者节目录制前公布。您可以关注相关的新闻和娱乐网站，以获取最新的节目单信息。

可以拒绝回答

Dataset		Dataset	
RealToxicity		TruthfulQA	
GPT	0.233	GPT	0.224
Supervised Fine-Tuning	0.199	Supervised Fine-Tuning	0.206
InstructGPT	0.196	InstructGPT	0.413
API Dataset		API Dataset	
Hallucinations		Customer Assistant Appropriate	
GPT	0.414	GPT	0.811
Supervised Fine-Tuning	0.078	Supervised Fine-Tuning	0.880
InstructGPT	0.172	InstructGPT	0.902

使用了RLHF的InstructGPT相对于GPT-3产生的谎言更少(TruthfulQA)，毒性更少(RealToxicity)，同时不会频繁的编造事实(hallucinates)

内容来源：小牛翻译-生成式LLM系列直播, 5期，刘新宇

What Is the Scaling Law?

- 语言模型的Scaling law是一条log-linear曲线，指模型性能随着**模型规模呈指数级增长**而线性增加
- 模型规模包括**计算规模**、**数据规模**以及**参数规模**

Scaling law的恐怖之处在于，模型的性能似乎存在一个与规模有关的上界。
模型被“锁定”在相应的标度内，无法明显的突破。

内容来源：小牛翻译-生成式LLM系列直播, 5期, 刘新

Making the LLM getting Larger

Scaling Law

- Scaling Law 昭示了更大的计算量一定会带来更好的效果（更低的**预训练损失**）

- 更大的计算量也会带来更好的**下游任务表现**

Big Model Fine-tuning Task

- BERT时代的模型微调：对预训练模型在**特定任务的全量数据**上进行**全参数微调**
- **缺少多任务之间的泛化能力**

Main Challenge --- Difficult to fine-tune LLM

- 大模型在微调中更新所有参数，需要在**计算**中占用庞大的显存
- 大模型在微调中对每一个任务存储一个大模型，需要占用庞大的**存储空间**

模型的参数规模越来越大，使之更加难以微调

任务种类繁多，难以对所有任务都进行全参数微调

Key Points for Fine-tuning the LLM

- 大模型时代的模型微调：具备少数据、少参数、强任务的泛化能力
 - 少量数据上的**提示微调**
 - 少量参数上的**增量微调**
 - 多种任务上的**指令微调**

Fine-tuning the LLM

- 微调是大模型适配到各种场景的关键技术
- **数据高效**：使用**提示微调**组织训练和任务格式
 - 统一预训练与下游任务形式
 - 仅需少量样本就可适配新任务
- **参数高效**：使用**增量微调**激活大模型能力
 - 计算 & 存储高效
 - 仅需少量参数就可与全参数微调相当
- **任务泛化**：使用**指令微调**打破任务壁垒
 - 极大增强了大模型的意图理解能力
 - 构建ChatGPT的关键一步

微调 (Finetune)

提示学习 (Prompt Tuning)

指令学习 (Instruction Tuning)

微调、提示学习以及指令学习对比

Question:

麦田怪圈是什么？它们是如何形成的？

Action Sequence:

Search → Load Page <1> → Scroll Down × 5 → Scroll Up → Scroll Down × 11 → Go Back → Search → Load Page <1> → Go Back → Load Page <3> → Scroll Down × 4 → Scroll Up × 3 → Quote → Scroll Down → Quote → Scroll Down → Quote → Scroll Down → Quote → Finish

Supporting Facts:

1. 麦田怪圈（Crop Circle），是指在麦田或其它田地上，通过某种未知力量（大多数怪圈是人类所为）把农作物压平而产生出来的几何图案。这个神秘现象有时被人们称之为“Crop Formation”。麦田怪圈的出现给了对支持外星人存在论的人们多种看法。
2. 人为说：人为说一般认为，麦田圈是用木板压成的。木板两头系上绳子形成圈套，在制作时，一脚踩在木板上拖动木板压倒麦子，并拉着细绳与圆心保持固定的距离，逐渐就可以形成一个圆圈。为了便于制造，主要形状所有圆圈的直径都可以被6除尽。以前曾经出现过制作麦田圈被当场抓获的事情，制作者使用的就是这种工具。
3. 自然形成说：也有人认为，麦田圈只是一种，成因还未被人类发现。就像雷电，古时候人类也是以为是雷神电母做的，对于麦田圈中经常出现人文信息的现象，他们认为这只是人们“先入为主”造成的错觉。
4. 磁场说：有专家认为，磁场中有一种神奇的移动力，可产生一股电流，使农作物“平躺”在地面上。美国专家杰弗里·威尔逊研究了130多个麦田怪圈，发现90%的怪圈附近都有连接高压电线的变压器，方圆270米内都有一个水池。由于接受灌溉，麦田底部的土壤释放出的离子会产生负电，与高压电线相连的变压器则产生正电，负电和正电碰撞后会产生电磁能，从而击倒小麦形成怪圈。

Answer:

麦田怪圈是指在麦田或其它田地上，通过某种未知力量（大多数怪圈是人类所为）把农作物压平而产生出来的几何图案。【1】而麦田怪圈的形成有三个说法，人为说、自然说与磁场说。人为说一般认为，麦田圈是用木板压成的。木板两头系上绳子形成圈套，在制作时，一脚踩在木板上拖动木板压倒麦子，并拉着细绳与圆心保持固定的距离，逐渐就可以形成一个圆圈。为了便于制造，主要形状所有圆圈的直径都可以被6除尽。【2】自然形成说认为麦田怪圈的成因还未被人类发现。就像雷电，古时候人类也是以为是雷神电母做的，对于麦田圈中经常出现人文信息的现象，他们认为这只是人们“先入为主”造成的错觉。【3】磁场说认为，磁场中有一种神奇的移动力，可产生一股电流，使农作物“平躺”在地面上。【4】

WebCPM

- WebCPM's framework consists of **two models**:
- **Search model**, consisting of:
 - **Action** prediction module
 - Search query generation module
 - Supporting fact extraction module
- Information synthesis model

<https://github.com/thunlp/WebCPM>

WebCPM

For an action sequence of T steps, the **search model** executes actions to collect supporting facts, which are sent to the **synthesis model** for answer generation.

WebCPM

Holistic Pipeline Evaluation (based on human preference)

Model-generated Answer v.s. Human Annotation

Three sources of supporting facts are sent to the synthesis model

(1) pipeline-collected, (2) human-collected, (3) non-interactive search (TF-IDF)

Outline

- Fine-Tuning Strategies & Challenges for LLM
- Categorization of Tools
- Benchmarking Tool Use
- Open-source Tool-Kit

Benchmarking Tool Use

Tool Bench

- Open-source, e.g., LLaMA & Vicuna, remain **significantly limited** in performing high-level tasks, such as **tool use**
- Reason: current instruction tuning largely focuses on **basic language tasks** instead of the **tool-use domain**
- This is **in contrast to** SOTA LLMs, e.g., ChatGPT, which have demonstrated excellent tool-use capabilities
- How to bridge the gap?

Tool Bench

- Introducing ToolBench, an instruction-tuning dataset for tool use
- Elicit tool-use capabilities within **open-source** LLMs

The screenshot shows the GitHub repository for ToolBench. At the top, there are buttons for 'Edit Pins', 'Watch 13', 'Fork 32', and 'Starred 548'. Below these is the repository name 'ToolBench' with a logo featuring a hammer and wrench. A statistics bar displays: 'Tool Num 3451', 'API Num 16464', 'Current Dataset Size 12K', 'Total API Call 37K', and 'Average Reasoning Traces 4.1'. Below the statistics, it says 'Tool LLaMA Released'. At the bottom, there are links: 'Model • Data Release • Toolkit • Paper • Paper List • Citation •'.

<https://github.com/OpenBMB/ToolBench>

Tool Bench Construction --- Overview

- Inference and evaluation of the pipeline

<https://github.com/OpenBMB/ToolBench>

Constructing Tool Bench

- API Collection
 - [RapidAPI Hub](https://rapidapi.com/hub)
 - <https://rapidapi.com/hub>
 - Filter from 50000+ APIs
 - Retain 16000+ APIs
 - 49 categories

Constructing Tool Bench

• Instruction Generation

- Single-tool + Multi-tool
- (1) sample a few APIs
- (2) generating instructions and their relevant APIs

ChatGPT $(([S_1^{rel}, Inst_1], \dots, [S_{N'}^{rel}, Inst_{N'}]) | API_1, \dots, API_N, seed_1, \dots, seed_3).$
 $\{API_1, \dots, API_N\} \in \mathbb{S}_{API},$
 $\{seed_1, \dots, seed_3\} \in \mathbb{S}_{seed}$

1 Single-tool instructions

2 Intra-category multi-tool instructions

3 Intra-collection multi-tool instructions

Constructing Tool Bench

- Answer Annotation
 - gpt-3.5-turbo-16k: function call feature
- Failure of ReACT / CoT
 - Error Propagation: a mistaken action may propagate the errors further
 - Limited Exploration: although the action space is infinite, CoT or ReACT only explores one possible path

Method	Single-tool (I1)	Category (I2)	Collection (I3)	Average
ReACT	43.98	23.62	20.42	29.34
ReACT@N	50.80	36.14	32.87	39.94
DFSDT	54.10	47.35	44.80	48.75

Constructing Tool Bench

• Answer Annotation

Tool Eval

- An automatic evaluator based on ChatGPT
- Two metrics:
 - Pass Rate: the proportion of completing an instruction within limited OpenAI API calls
 - Preference: the **quality/usefulness** comparison between two answers, i.e., which is better?
- High-correlation with human experts (~80%)

Tool Eval

- An automatic evaluator based on ChatGPT

ToolEval Leaderboard

a brick weighs 30% of a brick plus five GPUs
there are 100 bricks and 200 GPUs in a metric ton
how much does a brick weigh?

Let's call the weight of a brick "B" and the weight of a GPU "G". We can set up an equation based on the information given:

```
from sympy import symbols, Eq, solve  
  
B, G = symbols('B G')  
eq1 = Eq(B, 0.3 * B + 5 * G)  
eq2 = Eq(100 * B + 200 * G, 1000)  
solution = solve((eq1, eq2), (B, G))  
solution[B]
```

```
# Result  
7.812500000000000
```

Finished calculating ^

The weight of a brick is 7.8125 kg.

LANGUAGE AND INFORMATION TECHNOLOGIES (LIT)

UNIVERSITY OF MICHIGAN

{oignat, jinzhi, mihalcea}@umich.edu

Abstract

Recent progress in large language models has enabled the deployment of many generative NLP applications. At the same time, it has also led to a misleading public discourse that “it’s all been solved.” Not surprisingly, this has in turn made many NLP researchers – especially those at the beginning of their career – wonder about what NLP research area they should focus on. This document is a compilation of NLP research directions that are rich for exploration, reflecting the views of a diverse group of PhD students in an academic research lab. While we identify many research areas, many others exist; we do not cover those areas that are currently addressed by LLMs but where LLMs lag behind in performance, or those focused on LLM development. We welcome suggestions for other research directions to include: <https://bit.ly/nlp-era-llm>

1 Background

Language models represent one of the fundamental building blocks in NLP, with their roots traced back to 1948 when Claude Shannon introduced Markov chains to model sequences of letters in English text (Shannon, 1948). They were then heavily used in connection to the early research on statistical ma-

idea: given a series of previous words or characters, we can predict what will come next. The new large language models (LLMs) benefit from two main developments: (1) the proliferation of Web 2.0 and user-generated data, which has led to a sharp increase in the availability of data; and (2) the growth in computational capabilities through the introduction of Graphics Processing Units (GPUs). Together, these developments have facilitated the resurgence of neural networks (or deep learning) and the availability of very large training datasets for these models.

Current LLMs have output quality comparable to human performance, with the added benefit of integrating information from enormous data sources, far surpassing what one individual can accumulate in their lifetime. The number of applications that benefit from using LLMs is continuously growing, with many cases where the LLMs are used to replace entire complex pipelines. LLMs becoming “lucrative” has led to a surge in industry interest and funding, alongside a sharp increase in the number of research publications on LLMs. For instance, a search on Google Scholar for “language models” leads to 50,000 publications over the past five years, a third of the roughly 150,000 papers published during the past 25 years.

Future Research Topic for LLM

Choose Your Weapon: Survival Strategies for Depressed AI Academics

Julian Togelius and Georgios N. Yannakakis*

April 14, 2023

Abstract

Are you an AI researcher at an academic institution? Are you anxious you are not coping with the current pace of AI advancements? Do you feel you have no (or very limited) access to the computational and human resources required for an AI research breakthrough? You are not alone; we feel the same way. A growing number of AI academics can no longer find the means and resources to compete at a global scale. This is a somewhat recent phenomenon, but an accelerating one, with private actors investing enormous compute resources into cutting edge AI research. Here, we discuss what you can do to stay competitive while remaining an academic. We also briefly discuss what universities and the private sector could do improve the situation, if they are so inclined. This is not an exhaustive list of strategies, and you may not agree with all of them, but it serves to start a discussion.

1 Introduction

As someone who does AI research in a university, you develop a complicated relationship to the corporate AI research powerhouses, such as DeepMind, Open AI, Google Brain and Meta AI. Whenever you see one of these papers that train some kind of gigantic neural net model to do something you weren't even sure a neural network could do, unquestionably pushing the state of the art and reconfiguring your ideas of what is possible, you get conflicting emotions. On the one hand: it's very impressive. Good on you for pushing AI forward. On the other hand: how could we possibly keep up? As an AI academic, leading a lab with a few PhD students and (if you're lucky enough) some postdocs, perhaps with a few dozen GPUs in your lab, this kind of research is simply not possible to do.

To be clear, this was not always the case. As recently as ten years ago, if you had a decent desktop computer and an internet connection you had everything you needed to compete with the best of researchers out there. Ground-breaking papers were often written by one or two people who ran all the experiments on their regular workstations. It is useful to point this out particularly for those who've come into the research field within the last decade, and for which the need for giant compute resources is a given.

- Try Scaling Anyway
- Scale Down
- Reuse and Remaster
- Analysis Instead of Synthesis
- **RL! No Data!**
- **Small Models! No Compute!**
- Work on Specialized Application Areas or Domains
- Solve Problems Few Care About (For Now!)
- **Try Things that Shouldn't Work**
- Do Things That Have Bad Optics
- Start it Up; Spin it Out!
- **Collaborate or Jump Ship!**
